

Fiery® proServer Premium

Digital Front End

Maximum power, cutting-edge design

Fiery® proServer Premium is a turnkey digital front end for driving EFI™ printers, providing production tools, color management, workflow, and FAST RIP and FAST Processing acceleration technologies. Its innovative and robust design is the most advanced available for superwide printing.

The combination of Fiery server technology and workstation provide the most productive and comfortable workspace for all users.

Ergonomic operation

The Fiery server, and height-adjustable workstation adapts to the operator's height for less fatigue and higher productivity. The display adjusts vertically, and tilts for the best viewing angle.

High-efficiency work area

A proximity sensor changes the display from the Fiery screen saver to the active application when it identifies someone approaching. This allows operators to resume work right away.

The compact design reduces the footprint by over 20% but still offers a larger work area with a top tray to store commonly used items. Five USB ports are easy to access. A wireless mouse and keyboard save space and make the work area more flexible.

Quick and easy to install and maintain

The server computer glides out on a sliding shelf for easy installation and service access. Cables are neatly stored in the inside cabinet to keep them protected and out of the way.
