

Fiery® Color Controller N-70A vs N-50A

Fiery FS500 Pro

The right choice

RICOH® offers two Fiery® servers designed for the Pro™ C7500: Color Controllers N-70A and N-50A. This document will help you identify the correct solution for your high production environment.

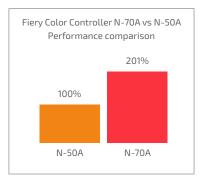

When to choose Fiery Color Controller N-70A over N-50A

FASTER PROCESSING SPEED

Fiery Color Controller N-70A features **Fiery HyperRIP**, an exclusive Fiery technology that helps achieve uninterrupted production and expands performance with parallel job processing power. With HyperRIP, the Fiery server can split a single job into eight logical parts for parallel processing, or it can RIP multiple jobs simultaneously.

Plus, **Fiery Color Controller N-70A is 2x faster** compared to Color Controller N-50A. It provides more power to cost-effectively handle the additional processing required to manage complex files with multiple layers, transparencies, and overprints, making it the best choice for demanding production environments and future-proofing your investment.

OPERATORS NEED TO MAKE LATE-STAGE EDITS AND CORRECTIONS TO FILES

In demanding print environments, operators need to be able to easily perform latestage edits to adjust colors and preview full raster files to ensure they are errorfree. Fiery Color Controller N-70A comes standard with Fiery Graphic Arts Pro Package to identify and correct print problems before they result in rejected jobs and waste. Key features include:

- Fiery Spot Pro: Ensure that brand colors are reproduced correctly, every time. With
 Fiery Spot Pro, users get the ability to create a spot color alias, import/export spot
 color libraries as .ase files, edit spot colors in a specific job, optimize all spot colors at
 once, and more.
- Fiery ImageViewer: Inspect files for errors before printing a single page no need to re-RIP before printing. Or, edit color curves and quickly make color replacements. And, export soft proofs in less than a minute.
- Fiery Postflight: Visual tool to identify page element errors.
- Fiery Control Bar: Create customized process control bars.

ESSENTIAL TOOLS FOR MAXIMIZING 5TH COLOR STATION CAPABILITIES

In addition to valuable late-stage editing tools, **Fiery Graphic Arts Pro Package**, **included with Fiery Color Controller N-70A**, **provides essential tools for maximizing the 5th color station capabilities**.

Fiery Spot Pro

- Optimize spot colors that include neon pink and neon yellow toners
- Create custom spot colors mixed with special toners like gold or silver
- View how adding neon pink and neon yellow to a spot color recipe can improve color accuracy
- Edit spot colors in a specific job
- Print swatch books that include 5th color station toners

Fiery ImageViewer

- Isolate 5th color station separations to ensure they will print properly
- See the difference in coverage when using neon pink and neon yellow as expanded gamut toners, versus only for spot colors.
- Perform color replacements and adjust color curves

MEET INCREASING DEMAND FOR VARIABLE DATA PRINTING

Ensure that you are prepared to meet the increasing demand for variable data printing (VDP) over the life of the lease. Both Fiery Color Controller N-70A and N-50A support all leading VDP formats and work with all leading variable data composition software. However, the **additional speed of Fiery Color Controller N-70A** enables printing at maximum productivity for even the most complex VDP jobs.

POWERFUL MAKEREADY TOOLS

Fiery Color Controller N-70A includes Fiery Impose-Compose. Out of the box, Fiery Impose delivers fully visual imposition that includes built-in integration with offline finishers, which can reduce job prep time by up to 70%. Plus, Fiery Compose provides an advanced preview and editing environment to simplify media assignments, tab printing, chapterization and document finishing.

What both Fiery servers offer

BUILT-IN PRINT INTELLIGENCE

Both Fiery servers include advanced job management tools to maximize the printer throughput. Fiery JobExpert™ helps reduce setup time by dynamically analyzing the incoming production file, finding issues quickly — including those that cannot be detected by an operator — automatically setting the optimal Fiery job settings, and processing jobs to achieve the best possible print quality.

INTEGRATION WITH JDF AND WORKFLOW SOLUTIONS

Both Fiery servers allow connectivity with leading web-to-print and MIS solutions, as well as with popular industry workflow solutions such as Heidelberg® Prinect, Kodak® PRINERGY, Agfa® Apogee, and SCREEN EQUIOS. This integration enables job information to flow through the system faster and more efficiently to reduce human error and save time.

OUT-OF-THE-BOX COLOR ENHANCEMENTS WITH FIERY EDGE

Both Fiery servers include Fiery Edge[™] color profiles, which deliver improvements in many key color quality areas for digital print producers. Fiery Edge helps produce the smoothest color transitions and blends. It provides maximum shadow details in neutral and chromatic areas. Plus, it gives users controls to produce more saturated, vivid, and stunning print results. Use Fiery Intensify[™], a rendering intent innovation that is part of Fiery Edge, to boost color and saturation, while maintaining neutral grays and perfect skin tones.

A PURE PDF WORKFLOW

Both Fiery servers integrate Adobe® PDF Print Engine technology to offer a choice of endto-end native PDF or legacy workflows. This provides consistency and flexibility from design to output in digital and offset print environments.

ACCURATE, CONSISTENT COLOR

Both servers render all combinations of color spaces and transparency blends correctly using industry-standard tests such as Altona Test Suite 2 and Ghent PDF Output Suite version 5.0. They offer default settings that maximize performance with the best color quality right out of the box. They can also sharpen images, smooth flesh tones, and enhance the natural color of any photo in a document with the fully integrated Fiery Image Enhance Visual Editor.

COMPATIBLE WITH INDUSTRY STANDARDS

Fiery servers support most industry VDP formats, including Fiery FreeForm™ Plus (output from Fiery FreeForm Create, an included, standalone VDP application); PPML 2.0/2.2/3.0; PDF/VT 1 and 2; and Creo VPS™
