

Be more productive with automation.

With the Fierly Automation Package, you can reduce job touchpoints and make your print workflow more efficient and profitable.

- Automated job submission features for increased productivity
- Advanced queue management controls to manage print priorities without disrupting production
- JDF technology to automate and integrate business and print processes for higher efficiency and increased profit
- Integrated preflight capabilities to reduce errors and waste

What's included

The following features are included in Fiery Automation Package for FS400 and newer embedded Fiery servers.

FEATURE	DESCRIPTION
Fiery Preflight	Preflight files manually or automatically via Fiery Hot Folders or Fiery JobFlow to easily identify job errors before they result in unsellable print products.
Fiery Hot Folders	Automates the print job submission process with a PC or Mac client tool and drag-and-drop functionality. Ideal for batch processing of multiple files with the same print settings. Filters allow users to route jobs to a print server with predetermined settings.
Hot Folder Filters	Automates job submission through Hot Folders for graphic arts file formats (PS, PDF, EPS, TIFF, VDP, JPEG, PDF/X Preflight, DOC, DOCX, XLS, XLSX, PPT, PPS, PPTX, PPSX, PUB).
Fiery Virtual Printers	Automates the "File-Print" print submission process, saves time and increases productivity. Enables administrators to create a specific configuration for an output device and present it to users as a printer. Relieves users of the repetitive task of configuring print settings for multiple jobs.
Fiery JDF	Enables built-in JDF-based integration support to automate processes from job submission to output by integrating print workflow and business management systems so that job information can flow through the systems with less touchpoints and errors.
Fiery JobFlow Base	Offers automated prepress processes that are easy to set up and use, minimising rework and boosts overall efficiency on the print floor. Comes in two versions: JobFlow Base, a free version, and JobFlow, a paid version that provides additional functionality.
Rush Print	Eliminates the need to stop and restart production when one job needs to be printed right away. Prevents waste by allowing operators to resume and finish a job that was paused during printing instead of having to cancel and discard the previously printed portion of the job.
Schedule Print	Balances workload and prioritises print production to minimise production peaks and eliminate bottlenecks.
Print/Process Next	Allows the operator to pick the next job to process or print immediately after the job that is currently printing or processing.

Try it for free

You can request your free 30-day trial of the Fiery Automation Package at www.efi.com/fieryautomation.

How to buy

The Fiery Automation Package is available to purchase from Fiery resellers in 1, 2, 3, 4, or 5-year term licenses.

EFI fuels success.

We develop breakthrough technologies for the manufacturing of signage, packaging, textiles, ceramic tiles, and personalised documents, with a wide range of printers, inks, digital front ends, and a comprehensive business and production workflow suite that transforms and streamlines the entire production process, increasing your competitiveness and boosting productivity.
