

# Qualifying questions:

## Fiery imagePASS-R1 Server

### For the imageRUNNER ADVANCE DX C5800 Series

If you answer “Yes” to any of these 10 questions, adding a imagePASS-R1 Server to your Canon imageRUNNER ADVANCE DX C5870i/C5860i/C5850i/C5840i could improve the quality of printed documents, make employees more productive, reduce internal printing costs, and save outsourced printing expenses.

**1. Does your company have an in-house marketing department?**

Yes  No

The imagePASS-R1 Server allows your marketing department to print high-quality colour documents in-house with very quick turnaround times. You save time and money on outsourcing, gain the flexibility to change or customise documents on demand, and can cost-effectively print only what you need.

**2. Do you print large, graphic-rich files or a heavy volume of short jobs?**

Yes  No

The Fiery server can quickly process complex documents like graphic-rich Microsoft® PowerPoint® and long Adobe® PDF files. For busy offices and light production environments that often have lots of files waiting to print, Fiery technology processes one file while printing another to minimise wait times.

**3. Do you use Adobe Creative Suite applications, such as InDesign, Illustrator, or Photoshop?**

Yes  No

Personnel using these applications usually create more complex print files and have specific colour and imaging requirements. A Fiery server will ensure their finished documents have accurate colour and correctly represent the designer's intent, especially for technical elements such as overprints and transparencies.

**4. Do you need out-of-the-box colour quality?**

Yes  No

Fiery Driven™ printers that have Fiery Edge default ICC profiles deliver superior out-of-the-box colour and quality enhancements. The latest EFI™ colour profiling technology delivers smoother colour transitions and blends, enhanced shadow detail in neutral and chromatic areas, better blacks for more dynamic range, more image definition, depth, and clarity; and better rendering of RGB images containing blues and reds.

**5. Do you need accurate colour for company logos and corporate colours?**

Yes  No

A Fiery server gives you the most accurate colour for branded materials like client presentations, that have specific colours, such as PANTONE. With the standard Fiery Spot-On, you can create and edit custom spot colours to achieve the most accurate colour matching possible.

**6. Is colour consistency throughout a document important to you?**

Yes  No

For image- or graphic-rich documents such as financial or real estate proposals, Fiery technology ensures great colour for photos and flesh tones. Optional tools enable visual colour and image editing, such as red-eye removal. For advanced functions such as colour profiling, choose the optional Fiery Color Profiler Suite with an ES-3000 spectrophotometer or other supported measuring devices.

**7. Are you interested in personalising communications inhouse?**

Yes  No

Adding personalisation is a proven way to raise the impact of all types of documents, such as event invitations, name tags, or customer communications. [Fiery FreeForm™ Create](#) is a free application that allows you to easily create documents with personalised text, images, or even barcodes.

**8. Do you want to produce more finished booklets or brochures inhouse? For example, do you have a training or HR department that produces materials for internal or external use?**

Yes  No

Fiery VUE is a free "visual print driver" for printing booklets simply, or assembling multiple document types (such as PDF, PowerPoint®, and Excel® documents) into a finished booklet. It's a Windows-based application and can be used standalone or from within Microsoft® Office® applications. A Fiery server is also ideal for users who require different types of paper in a job (such as for the cover and the body).

**9. Do you want to simplify print job submission?**

Yes  No

Fiery Presets (standard) or Virtual Printers (optional) reduce wasted prints and costs by giving employees the ability to confidently print exactly what they want on the first try using the simple File > Print command from applications such as Microsoft® Office® or Adobe Creative Suite®. Users enjoy a consistent interface, whether they're using the Fiery driver or Fiery Command WorkStation® on Mac® or Windows® clients.

**10. Does your MFP need to comply with your organisation's data backup or security protocols?**

Yes  No

The Fiery server offers pre-defined security profiles based on different risk or threat levels, plus user encryption and advanced authentication methods. It's easy to schedule automated backups or to restore from a previous system backup.
