

5 questions to find out if it's the right solution for your business

Answer these questions to identify how much your print operation can benefit from having Fiery® Color Profiler Suite. If you answer “yes” to some of these questions, Fiery Color Profiler Suite could provide significant benefits and give you the chance to increase profits.

Why Fiery Color Profiler Suite?

Fiery Color Profiler Suite is a complete colour management solution that allows you to:

- Create, edit, and maintain ICC colour profiles
- Successfully match colour to a colour reference and optimise spot colours
- Match output across multiple printers to achieve shop-wide consistency
- Perform quality assurance during a print run.

Fully integrated with Fiery print servers for toner and inkjet digital printers, Fiery Color Profiler Suite streamlines the calibration and profiling process and guarantees accurate results every time.

1. Is consistent colour across all of your digital print systems a necessity for your business?

☐ Yes ☐ No

Colour reproduction on digital print systems is highly influenced by environmental conditions in your shop, and your press maintenance cycle. By implementing colour management, you can achieve colour consistency and high quality output for all your print systems. Fiery Color Profiler Suite allows you to create a printer output profile, optimised using the colour settings for your specific press/paper combination, by loading the approved factory-default profile settings from the manufacturer of your press.

2. Do you need colour consistency across multiple print engines?

☐ Yes ☐ No

If you have more than one print engine of the same make and model, you can split long-run jobs across multiple presses to optimise productivity. However, you may see visual differences between the presses. Fiery Color Profiler Suite eliminates this problem by creating custom calibration sets, a shared gamut, and a common output profile for Fiery Driven™ print engines to achieve the best visual match on the same paper.

3. Do your customers demand print output that matches their brand colours?

☐ Yes ☐ No

In today's business world, companies and organisations have corporate or custom colours as part of their brand identity. Brand owners are fiercely protective of these colours, demanding accurate reproduction in all instances where a brand colour is used. Fiery Color Profiler Suite includes tools for optimising spot colour matching on digital print systems to satisfy print buyers.

4. Do you need tools for operators or in-house colour experts to calibrate and profile print systems?

☐ Yes ☐ No

Fiery Color Profiler Suite's modular design provides the colour expert the most complete set of integrated colour management tools available for all your colour matching needs. It also allows even inexperienced operators to create calibration sets and printer profiles more easily than any other product on the market. In just five clicks, an operator with no prior colour experience can create a professional-grade calibration and output profile for your press/paper combination.

5. Is it important that your printed products comply with industry press standards?

☐ Yes ☐ No

Many print businesses today match their colour output to an industry reference such as ISO, SWOP, or GRACoL. This ensures consistency for reprints, allows matching of supplied proofs, and satisfies print buyer expectations for colour appearance. Fiery Color Profiler Suite provides tools for fast and easy verification of compliance with a colour standard.
