

Fiery® Prep-it™

What's new in version 6.3.1

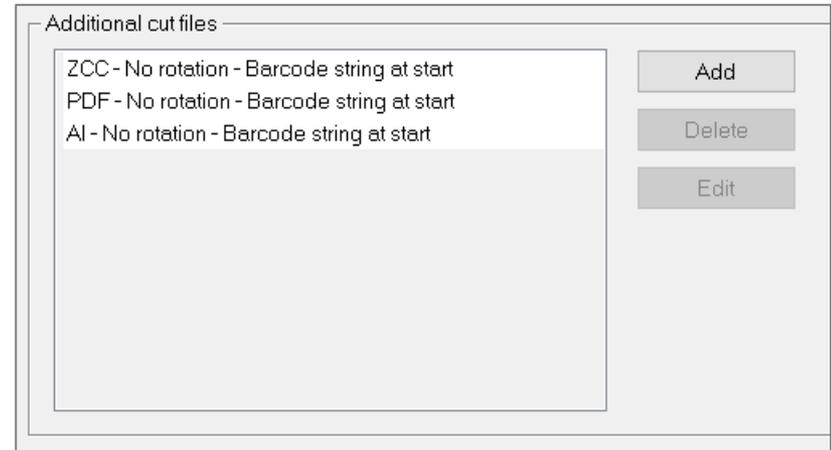

Contents

- New features:
 - Cut file enhancements
 - Enhanced measurement unit definition
 - QR code related improvements
 - Cut contour improvement
 - System-level improvements
- Availability
- Resources

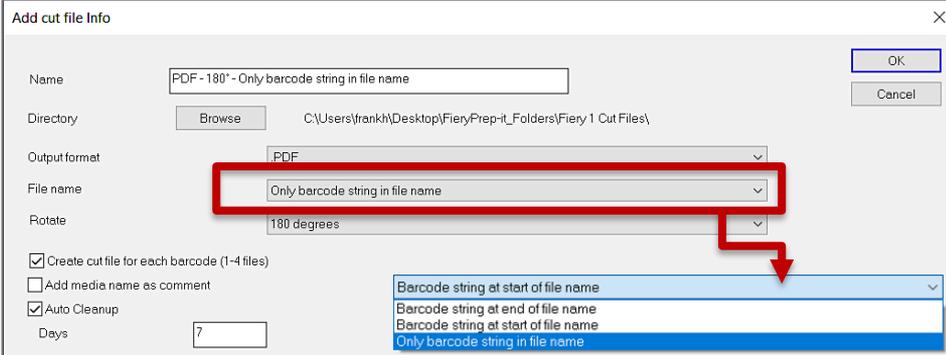

Cut file related enhancement

- Multiple cut file outputs can be defined and saved as presets
 - Flexibility to use multiple cutters in parallel to optimize production throughput
 - Flexibility to use same or different cutters that supports AI, PDF, ZCC cut file format
 - Enables the preview of cut files in PDF format prior to outputting on Zünd cutters using ZCC*

Cut file related enhancement

- Convention-based cut file naming with 3 predefined options
 - For correct recognition of the cut files to be used for cutting on the cutter when scanning the barcode at the cutter
 - E.g. iEcho cutters require “Only barcode string in the name” file name convention when using QR codes

The screenshot shows the 'Add cut file Info' dialog box with the following fields and options:

- Name: PDF - 180° - Only barcode string in file name
- Directory: C:\Users\frankh\Desktop\FieryPrep-It_Folders\Fiery 1 Cut Files\
- Output format: PDF
- File name: Only barcode string in file name (highlighted with a red box)
- Rotate: 180 degrees
- Create cut file for each barcode (1-4 files)
- Add media name as comment
- Auto Cleanup
- Days: 7

The expanded 'File name' dropdown menu shows the following options:

- Barcode string at start of file name
- Barcode string at end of file name
- Barcode string at start of file name
- Only barcode string in file name (highlighted with a blue bar)

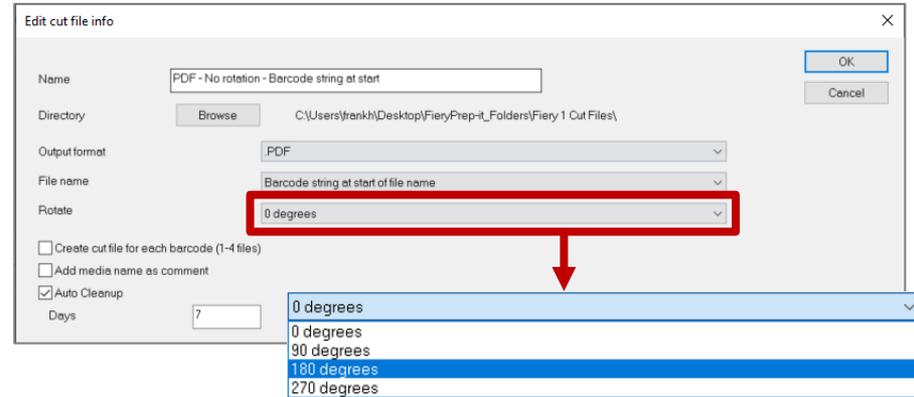

Cut file related enhancement

- Option to rotate cut files in 90° increments
 - Flexibility to support all kind of cutters through rotation of the cut files for correct cutting of the print job on the cutter
 - E.g. Kongsberg QR code is 180° opposite to the Fiery Prep-it QR code requiring to rotate the cut files by 180°

Kongsberg QR Code

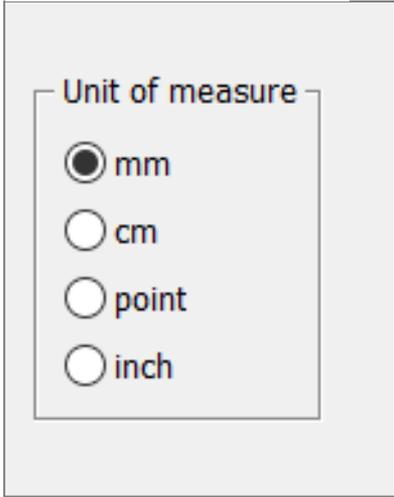

Fiery Prep-it QR Code

Enhanced measurement unit definition

- Unit of measure is definable in Fiery Prep-it Server Preferences (no longer defined by the Windows[®] OS regional setting)*
 - Provides the flexibility to switch without affecting other applications

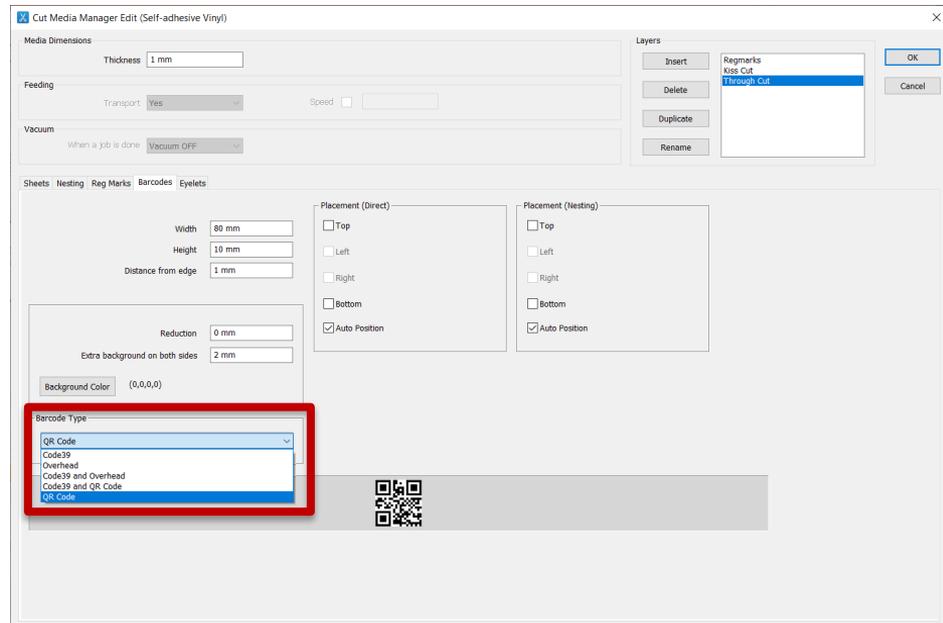

Preference Dialog.

The image shows a screenshot of a 'Preference Dialog' window. Inside the dialog, there is a section titled 'Unit of measure' enclosed in a rectangular box. Below this title, there are four radio button options: 'mm', 'cm', 'point', and 'inch'. The 'mm' option is selected, indicated by a filled black circle next to the text.

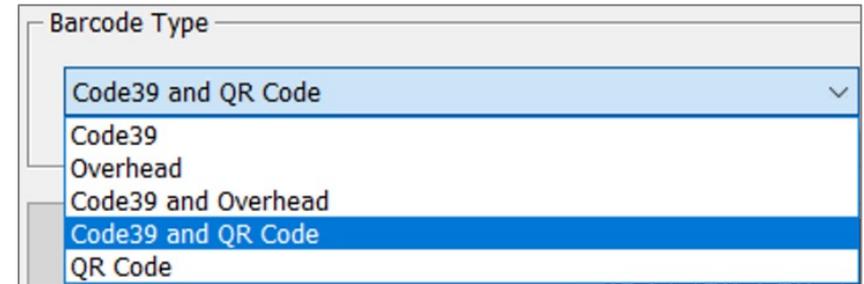

QR code related improvement

- Barcode Type “QR Code” now only places QR codes

QR code related improvement

- Additional Barcode Type
“Code 39 and QR Code” is available
 - Code 39 and QR codes are placed if Auto Position is selected
 - Only QR codes are placed if Top and/or Bottom is selected

Cut contour improvement

- Honors overprint setting for cut contour in PDF output
 - For all PDF Output Types where cut paths are created as spot colors for output to Fiery, Caldera, and ONYX

6.3.1.0

6.3.0.214

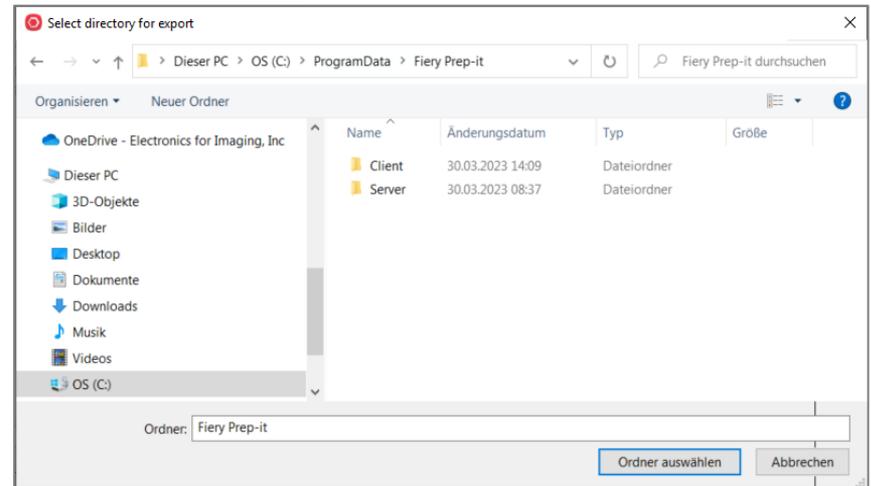

System-level improvement

- Support for macOS 13 (Ventura) for Fiery Prep-it client
 - Helps users stay up-to-date

System-level improvement

- The in-software Windows® file directory dialog changed to Tree View
 - Provides faster navigation for job importing
